**CERTIFICATE**

This is to certify that

- 1) Akash Goud
- 2) Harsh Verma
- 3) Chudasama BhagyarajSinh Surpal

Student/s of Semester- VI iMCA (TY iMCA), FCAIT, GLS University has/have successfully completed the System Development Project, System Design, Testing and Implementation work on  
“LOGIWEB”

---

as a partial fulfillment of the study of Third year Semester-VI,  
Integrated Bachelor of Computer Applications(iMCA).

Date of Submission: 18-03-2026

**Prof. (Namrata Shah)**  
Project Guide

**Dr. Tripti Dodiya**  
Project Co-Ordinator

## Certificate

Date: 16th March, 2026

This is to acknowledge that **HARSH VERMA (202302519010095)**, **AKASH GOUD (202302519010075)**, and **CHUDASAMA BHAGYARAJ SINH SURPAL (202302519010085)** have successfully undergone project training during the academic year 2025–26.

They have worked on the project titled **“LOGIWEB”**, which focused on building an innovative digital platform aimed at managing events efficiently and improving coordination between users and administrators. As part of the training program, they contributed to system analysis, UML documentation, database structuring, and interface layout planning.

Throughout the training tenure, they demonstrated professionalism, consistency, and a positive learning attitude. Their ability to collaborate effectively and adapt to project requirements was commendable.

We extend our best wishes for their continued success in future academic endeavors and professional careers.

Sincerely,

Mr. Akshay Prajapati,  
Owner,  
Sadhi Logistics Pvt. Ltd.

## 4. Acknowledgement

We would like to express our sincere gratitude to Mr. Akshay Prajapati, Founder at *Sadhi Logistics Pvt. Ltd.* for his valuable guidance, timely suggestions, and continuous support during our project training.

We also extend our heartfelt thanks to Ms. Namrata Shah for her mentorship and encouragement throughout the project development phase.

Finally, we want to acknowledge the support of our faculty, friends, and family members who contributed directly or indirectly to the success of this project.

Team Members:

- 1) Harsh Verma
- 2) Akash Goud
- 3) Chudasama Bhagyarajsinh

## **6. Company Profile**

Company Name: Sadhi Logistics Pvt. Ltd.

Location: 6, Alkapuri Tenament, Motera Road, Ahmedabad, Gujarat – 380005

Field of Work: End-to-End Logistics & Supply Chain Management

Overview: Founded in Ahmedabad, Sadhi Logistics Pvt. Ltd. is a trusted professional service provider specializing in customized logistic services, cargo transportation, warehousing, and supply chain management across Pan India. With a focus on speed, transparency, flexibility, and efficiency, their vision is to become a leading logistics partner recognized for integrity and innovation in every aspect of operations.

## 7. Project Profile

Project Name: LogiWeb

Technology Used:

- Frontend: HTML5, CSS, JavaScript
- Backend: Node.js, Express.js, three.js
- Database: MySQL, Supabase

Objective:

To provide an efficient B2B digital platform for requesting and managing freight shipments, reducing manual quoting work, and improving supply chain transparency for both corporate clients and logistics administrators.

Description:

The Sadhi Logistics B2B Portal enables corporate clients to securely register their companies, submit detailed shipment enquiries (FCL, LCL, Air, Road), track cargo status, and make secure online payments for invoices.

Administrators can review incoming shipment requests, compare database-driven dealer rates, add broker margins to generate final automated quotes, and monitor the entire logistics lifecycle, from initial enquiry to final settlement, through a centralized management dashboard.

## 8. System Requirement

### Hardware Requirements:

System: Laptop / Desktop Computer (Minimum 4GB RAM recommended)

Connectivity: Stable Internet Connection (Required for real-time database communication)

### Software Requirements:

Code Editor: Visual Studio Code (VS Code) or Sublime Text

Web Browser: Google Chrome, Microsoft Edge, or Mozilla Firefox (For running and testing the web application)

Database & Backend Services: Supabase Account (For PostgreSQL Database, User Authentication, and API services)

Local Testing: "Live Server" extension (Recommended for VS Code to test HTML/JS changes instantly)

## 9. Existing System

The existing system for freight quotation and logistics management is mostly manual or partially digital. In traditional methods, corporate clients need to contact logistics providers through phone calls, WhatsApp, or lengthy email chains to inquire about cargo transportation, route availability, and pricing.

There is no centralized digital platform where clients can submit their shipment details, receive standardized quotes, or confirm freight bookings easily. All critical records—such as client KYC (GSTIN details), shipment enquiries, dealer rate cards, and broker margins—are maintained manually in basic spreadsheets or physical files. This highly fragmented approach increases the chances of calculation errors, misplacements, and data loss.

The communication loop between the clients, the logistics administrators, and the third-party transport dealers is not efficient, often leading to misunderstandings regarding cargo dimensions, pickup dates, and pricing delays. It is also incredibly difficult to track the history of previous shipments, retrieve proof of delivery (POD) documents, or generate accurate financial reports for dealer settlements, making overall supply chain management less effective.

Additionally, the existing manual system lacks pricing transparency, proper data security for corporate records, and real-time status updates. Clients do not get rapid quotation turnarounds or instant confirmation of their shipments, and administrators face severe bottlenecks when trying to manage multiple active cargo movements and dealer comparisons simultaneously.

Overall, the current system is time-consuming, highly inefficient, and not user-friendly, which creates an urgent need for a more advanced, automated, and centralized B2B logistics solution.

## **10. Proposed System**

The proposed web-based B2B Logistics Portal provides an automated solution for freight quotation, shipment booking, and end-to-end supply chain management.

It significantly improves pricing transparency, data accuracy, and real-time operational tracking across the entire logistics lifecycle.

Corporate clients can securely register using their GSTIN, submit detailed cargo enquiries, accept finalized freight quotes, and make payments seamlessly.

Administrators are equipped with a comprehensive dashboard to compare automated dealer rates, apply broker margins, manage active shipments, and process invoices efficiently, drastically reducing quoting delays and manual paperwork.

## 14. Report:

### GLS UNIVERSITY

#### Faculty of Computer Applications and IT, iMCA Programme System Development Project Progress Report

Group No: 38

#### A. Student Detail:

- |                   |                 |                       |
|-------------------|-----------------|-----------------------|
| 1. Rno <u>B04</u> | Name of Student | <u>Akash Goud</u>     |
| 2. Rno <u>B24</u> | Name of student | <u>Harsh Verma</u>    |
| 3. Rno <u>B14</u> | Name of student | <u>Bhagyaraj Sinh</u> |

#### B. Project Details

1. Title of the Project: LOGIWEB
2. Software tools used: HTML5, Tailwind CSS, JavaScript, Node js, express js, MySQL, Firebase

#### C. Progress Details

| Current Status of the Project execution | Yes                                 | No                       |
|-----------------------------------------|-------------------------------------|--------------------------|
| C.1 System design completed             | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| C.2 System coding completed             | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| C.3 System testing completed            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

The External Project Guide is requested to verify the above details and put his/her signature here:

Signature of Students 1. Harsh 2. Akash Goud 3. Bhagyaraj

## 15. Conclusion

The Sadhi Logistics B2B Portal successfully automates and simplifies the entire process of freight quotation, shipment booking, and supply chain management.

It eliminates manual quoting dependencies, enhances pricing accuracy, and provides a highly professional, user-friendly interface developed using modern web technologies like HTML, CSS, JavaScript, and Supabase.

This project demonstrates how digital transformation can optimize complex logistics operations for both corporate clients and logistics administrators.
